

LUSAKA OPEN BUSINESS COLLEGE

CLASSROOM LESSON PLAN

NAME OF STUDENT	: TRISCENT BULAMBO
STUDENT NUMBER	: 22000707
COURSE NAME	: PSYCHOLOGY
NAME OF TOPIC	: INTELLIGENCE
VENUE	: CLASSROOM
INTAKE	: 2,1
SIZE OF CLASS	: 15
DATE	: 3TH February 2026
TIME	: 08:00 - 09:00
DURATION	: 2 HOURS
METHOD OF TEACHING	: LECTURE/DISCUSSION
MEDIA OF TEACHING	: WHITE BOARD MARKERS AND LAPTOP
NAME OF SUPERVISOR	: MR MUBANGA

INTRODUCTION

Good morning class, my name is Triscent Bulambo a student tutor from Chresso University pursuing a bachelor's of science in nursing, with me is my supervisor MR MUBANGA who is going to be with us throughout the lesson, sir you are welcome feel free to participate. Today we going to be looking at, INTELLIGENCE IN PSYCHOLOGY, feel free to ask and also to answer question.

GENERAL OBJECTIVE

By the end of the discussion/lecture, students should be able to acquire knowledge and understanding on intelligence.

SPECIFIC OBJECTIVES

By the end of the lecture/ discussion student nurses should be able to;

1. Define the term 'intelligence'
2. Describe the method used for measuring intelligence
3. Describe the two extremes of intelligence
4. Explain the determinants of intelligence

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONTENT	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Define the term 'intelligence'	DEFINITION - Intelligence is defined as the capacity to understand the world, think rationally and use resources effectively when faced with challenges (Feldman, 1996). - Intelligence is the ability to learn, understand, think, reason, solve problems, and adapt to new situations. It involves using knowledge, experience, and skills to make decisions and handle different challenges effectively.	White board, markers, laptop.	Explaining, asking and answering questions	Listening, asking and answering questions	What is intelligence?
10 minutes	Describe the method used for measuring intelligence	MEASURING INTELLIGENCE It is believed that every human action has some level of intelligence. The form of intelligence corresponds to the type of behaviour. The level of intelligence of an individual is measured by: - The difficulty of the task he/she can perform - The range or worthiness of the action he/she can perform - The speed with which he/she can do or perform an activity	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What methods are used for measuring intelligence?

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONT'	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Describe the method used for measuring intelligence	- The harder the task a person can perform the greater is his/her intelligence. ALFRED BINET'S TEST A psychologist by the name of Alfred Binet was charged with the responsibility of finding why children in Monispor School in German were backward. He came to the conclusion that the intelligence of a normal child develops without school education. He prepared a number of tests meant for measuring intelligence of children at each level and applied to them. He succeeded in standardizing his test. The results of the standardization test showed the following: - Some children may only pass tests for their age; whilst others may pass tests of a higher age. These children are referred to as above average. - Some children failed tests for their age range and these were referred to as below average.	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What methods are used for measuring intelligence?

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONT'	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Describe the method used for measuring intelligence	Binet used the intelligence Quotient (IQ) to measure intelligence. The intelligence Quotient is the ratio formed by dividing mental age, by chronological age and then multiplying by 100. $IQ = \frac{\text{Mental age}}{\text{Chronological age}} \times 100$ A child with a mental age of 6 and chronological age of 5 will have an IQ of 120. $IQ = \frac{\text{Mental Age}}{\text{Chronological}} = \frac{6}{5} \times 100 = 120 \text{ percentile}$	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What methods are used for measuring intelligence?

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONTENT	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Describe the two extremes of intelligence	EXTREMES OF INTELLIGENCE 1.INTELLECTUAL DISABILITY - Intellectual disability is also known as learning disability. - It is defined as a state of arrest or incomplete development of the intellectual faculties evident from childhood. - Intellectual disability is also defined as an intelligence quotient of 70 percentile or less. CLASSIFICATIONS OF INTELLECTUAL DISABILITY Intellectual disability can be classified as follows: - Mild Intellectual disability (IQ 55 – 70), 85% - Moderate Intellectual disability (IQ 40 – 55), 10% - Severe Intellectual disability (IQ 25 – 40), 3 – 4% - Profound Intellectual disability (IQ < 25), 1 – 2% The following are the causes of intellectual disability; - Fatal alcohol syndrome - Down's syndrome - Prenatal maternal illnesses e.g., toxoplasmosis	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What are the two extremes of intelligence?

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONT'	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Describe the two extremes of intelligence	- Childhood illnesses e.g., central nervous infections, brain tumours, head injuries Treatment for Intellectual disability: One of the treatments for children with intellectual disability is to enrol them in special schools to improve adaptive functioning. Other forms of treatment include treating: - The underlying physical conditions - Co-morbid psychiatric disorders like depression, anxiety and schizophrenia. 2. INTELLECTUAL GIFTEDNESS - Intellectual giftedness is used to refer to an individual with a very high intelligence quotient. - Such individuals develop much faster than their peers. - They acquire an advanced language at a tender age. - In a number of cases, they may find themselves in higher grades than their peers.	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What are the two extremes of intelligence?

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONTENT	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Explain the determinants of intelligence	Determinants of Intelligence There are four determinants of intelligence. These are: Heredity: the genes inherited from one's parents can determine whether a person will be clever, dull or average. Environment: it is believed that with adequate stimulation, the intelligence quotient can be shifted. The environment can determine whether a person will achieve his or her inherited maximum ability or not. For example, the school that one goes to may have a lot to do with how a person exploits their inherited abilities to the maximum. Racial differences in intelligence it is argued that white people have a richer environment than black people and some people blame the IQ tests which were developed by white people for lacking objectivity.	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What are the determinants of intelligence?

TIME/ MINUTES	SPECIFIC OBJECTIVE	CONT'	AUDIO VISUAL AID	TEACHER'S ACTIVITY	LEANER'S ACTIVITY	EVALUATION
10 minutes	Explain the determinants of intelligence	Gender differences in intelligence: it is highly debatable whether males are more intelligent than females. However, it has been noted that the two genders have not been given equal opportunities to develop. The male gender seems to have been given more opportunities and therefore appears to be more intelligent than the female gender.	White board, markers, laptop	Explaining, asking and answering questions	Listening, asking and answering questions	What are the determinants of intelligence?

SUMMARY

We have come to the end of the lesson/discussion where we have discussed about the definition, the method used for measuring intelligence, the two extremes of intelligence and the determinants of intelligence.

EVALUATION

1. What is intelligence?
2. What is method used for measuring intelligence?
3. What are the two extremes of intelligence?
4. What are the determinants of intelligence?

ASSIGNMENT

Indicate whether the following statements are True(T) or False (F)

- 1) Intelligence is the capacity to understand the world, think rationally and use resources effectively when faced with challenges.
- 2) The level of intelligence of an individual can be measured by the speed one can do or perform an activity.
- 3) Mental retardation is also known as learning disability
- 4) Severe mental retardation is when the intelligence quotient is (40-55), 10%
- 5) Hereditary is a determinant of intelligence.
- 6) Childhood illnesses such as brain tumours can cause mental retardation.
- 7) Profound mental retardation is when the intelligence quotient is less 25, 1-2%
